

IN THE CLAIMS:

Claims 1 through 11 are pending in the application. Claim 3 has been amended herein. Please note that all claims currently pending and under consideration in the referenced application are shown below. Please enter these claims as amended. This listing of claims will replace all prior versions and listings of claims in the application.

Listing of Claims:

1. (Previously Presented) In a wireless communication system supporting a broadcast service, a method comprising:

transmitting a broadcast session on a broadcast transmission channel; and

transmitting broadcast overhead information interleaved with the broadcast session on the broadcast transmission channel, wherein the broadcast overhead information provides information for processing the broadcast session.

2. (Original) The method as in claim 1, wherein the broadcast overhead information is a session description protocol message containing information for processing the broadcast session, and wherein the session description protocol message is interleaved with broadcast content of the broadcast session.

3. (Currently Amended) A ~~communication signal~~ transmitted method of transmitting a communication signal on a carrier wave, the signal comprising:

a broadcast session [portion]; and

a session description protocol message (SDP message) interleaved with the broadcast session, wherein the SDP message provides information for processing the broadcast session.

4. (Currently Amended) The ~~communication signal~~ method as in claim 3, wherein the signal is transmitted via a broadcast transmission channel.

5. (Previously Presented) In a wireless communication system supporting a broadcast service, a method comprising:

receiving a session description protocol (SDP) message interleaved with the broadcast session on a broadcast channel, wherein the SDP message provides information for processing the broadcast session;

accessing a broadcast session on the broadcast channel; and
processing the broadcast session using the SDP message.

6. (Original) The method as in claim 5, wherein the SDP message is interleaved with broadcast content of the broadcast session.

7. (Previously Presented) A wireless apparatus, comprising:

means for receiving a broadcast service parameter message corresponding to a broadcast session;

means for receiving a session description protocol (SDP) message interleaved with the broadcast session, wherein the SDP message provides information for processing the broadcast session; and

means for processing the broadcast session using the SDP message.

8. (Original) The apparatus as in claim 7, further comprising:

means for receiving header compression information.

9. (Previously Presented) The apparatus as in claim 7, further comprising:

memory storage adapted to store the SDP message corresponding to a plurality of broadcast sessions, wherein the SDP message of each of the plurality of broadcast sessions is updated when the corresponding broadcast session is accessed.

10. (Original) The apparatus as in claim 9, wherein the memory storage is a cache memory.
